SOLANA MOBILE · CLOCK IN · OCTOBER 2026

SMT World: Clock In

Call the market once a day against an AI trading agent. Solana keeps the score for both of you.

Android APK · Mobile Wallet Adapter · Solana devnet · SKR

Jannet Ekka · Smart Money Trading

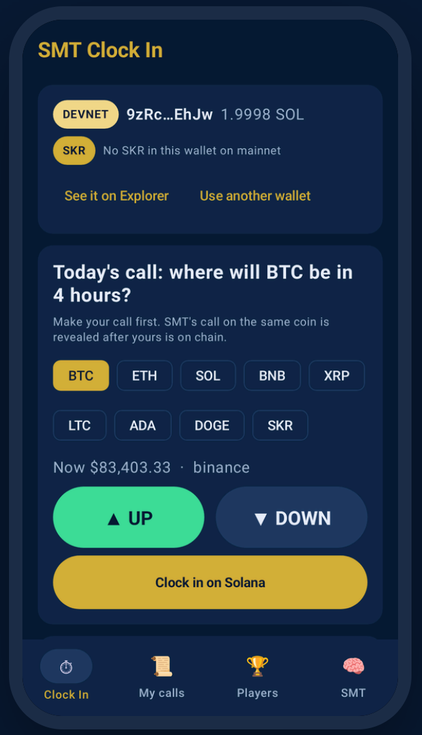

THE PROBLEM

Trading apps give you prices. AI trading agents give you claims.

- An AI agent's track record is whatever its operator's logs say. Nobody outside can check it.
- A market app gives people no reason to open it tomorrow, except another price chart.
- Clock In turns one prediction a day into a habit, and writes both sides of it on chain: yours and the AI's.

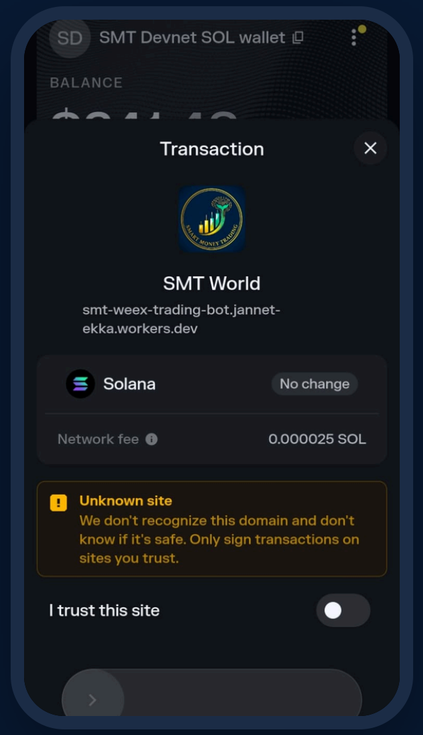

HOW A CLOCK IN WORKS

One call a day. Three taps.

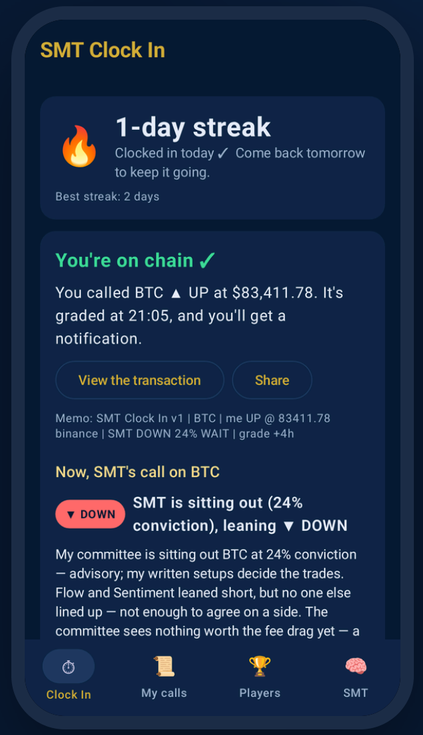

1

Pick one of 8 coins, or SKR. Call it UP or DOWN for the next 4 hours.

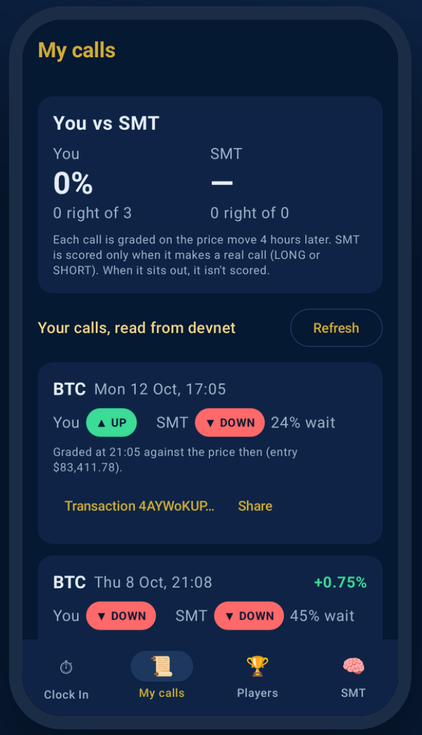

2

Your wallet (Phantom or Solflare) signs one devnet transaction through Mobile Wallet Adapter.

3

Only then does SMT reveal its own call on that coin, with its reasons.

4

4 hours later the call is graded on the market price. You get a notification.

My real BTC call of 12 Oct, rendered from the app's v0.3.0 code with that moment's data. Step 2 is my phone.

THE SOLANA PART

Every Clock In is a memo signed by your wallet.

```
SMT Clock In v1 | BTC | me UP @ 83411.78 binance | SMT DOWN 24% WAIT | grade +4h
```

Both calls, one timestamp

Your call and SMT's land in the same transaction, so neither can be written after the market moves.

Checkable without the app

The memo is plain text with the entry price and its source. Anyone can re-grade a call from Solana Explorer and public price data.

History and leaderboard from the chain

A second memo names one shared registry address. Your history and everyone's leaderboard are read back from Solana, so there's no server to trust.

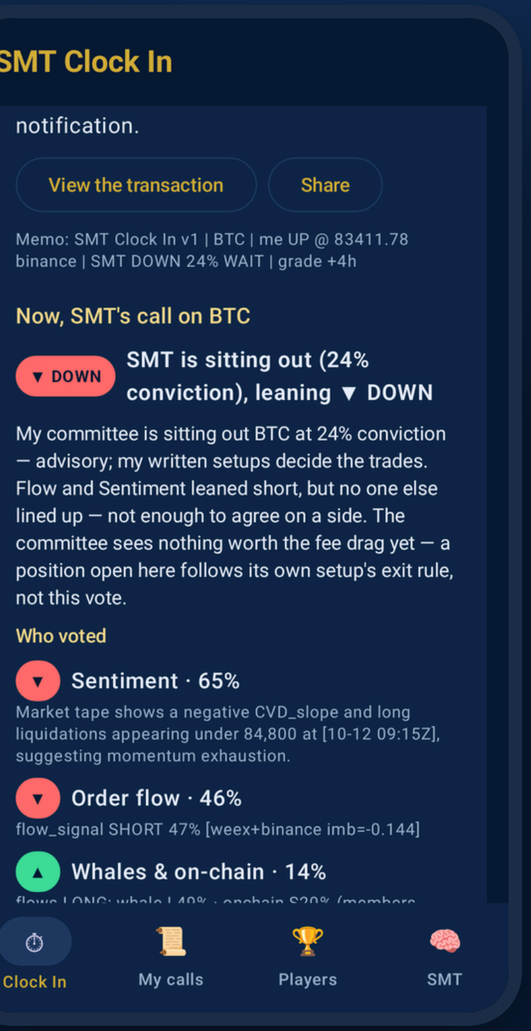

Free to play

Devnet only, paid with free SOL from the public faucet. No real money moves.

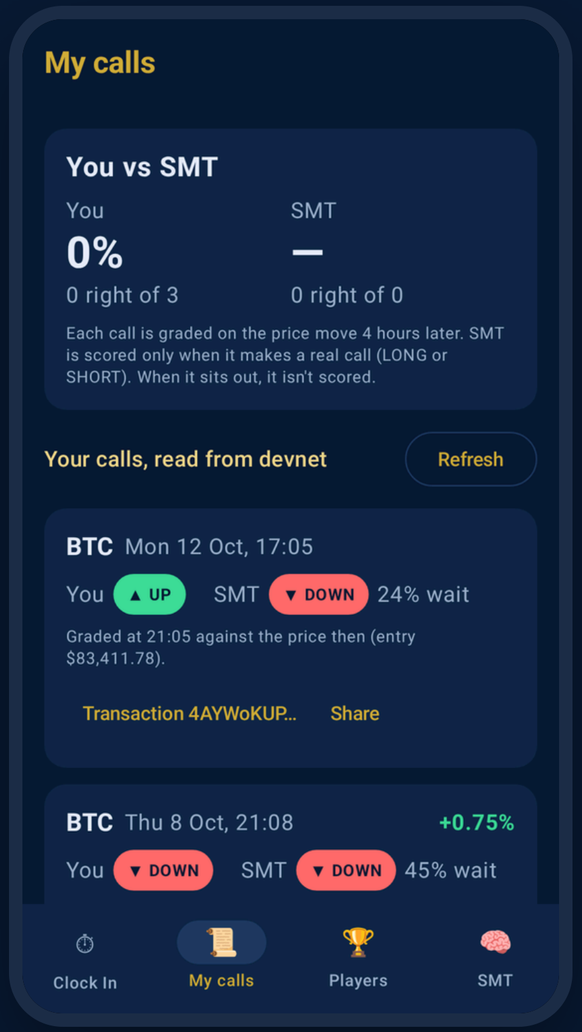

THE REVEAL

An AI that shows its work.

- SMT is a multi-persona trading agent: order flow, whales & on-chain, sentiment, technical, regime and catalyst each vote.
- A judge turns the votes into a call and explains it in plain words, including why it's sitting a coin out.
- SMT is scored only when it calls LONG or SHORT. When it sits out, the app shows its lean and doesn't grade it.

SMT's reasons on BTC at 11:35 UTC, 12 Oct, from its public feed.

WHY PEOPLE COME BACK

A reason to open it every day.

A streak kept on Solana

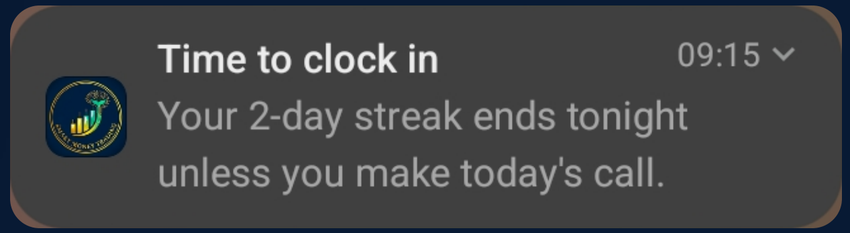

Miss a day and it resets. It survives a lost phone.

A result 4 hours later

A notification when your call is graded, and what SMT did.

You vs the AI

A running score. Beating a trading agent is a better hook than a price alert.

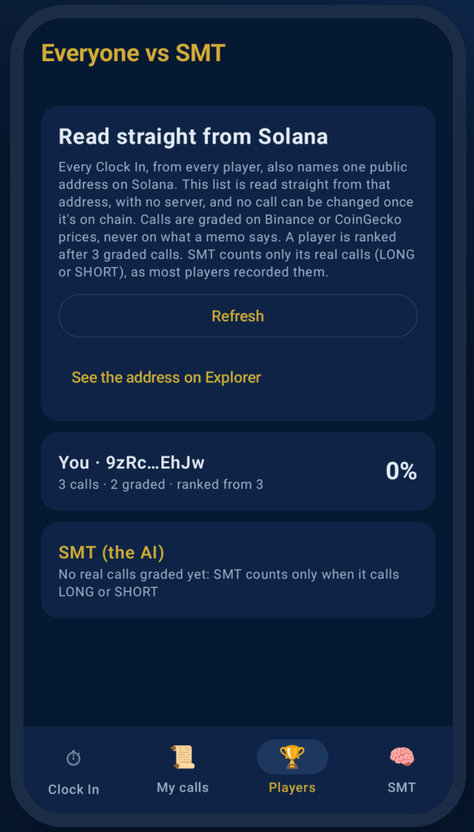

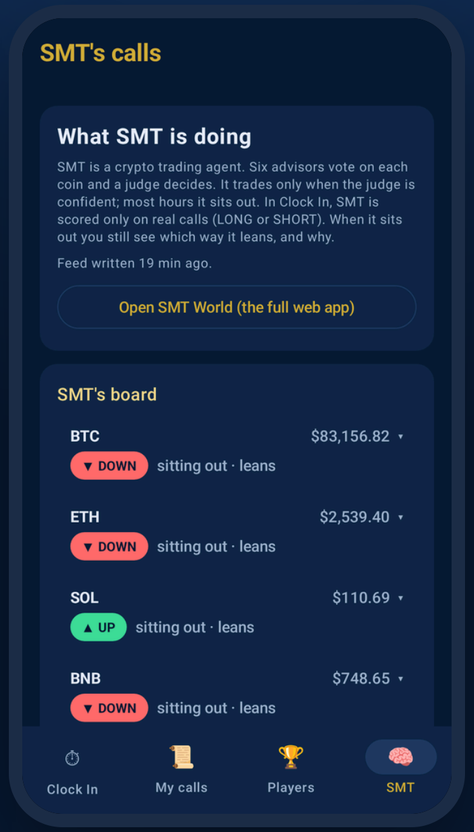

The 9:00 reminder, on my phone. It fires only if you haven't clocked in.

EVERYONE VS SMT

A leaderboard with no server.

- Players reads every Clock In from the shared registry address and ranks players after 3 graded calls.
- SMT gets its own row. Its call for a coin and hour is the one most players recorded, so one player can't rewrite it.
- The SMT tab shows the agent's view of all 8 coins, and unlocks after your call for the day.

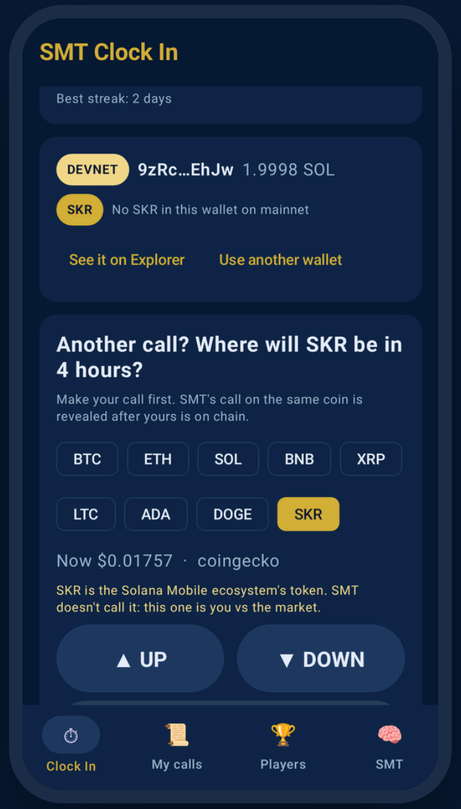

Rendered from the app's v0.3.0 code with live devnet and SMT data, 12 Oct.

MADE FOR A PHONE

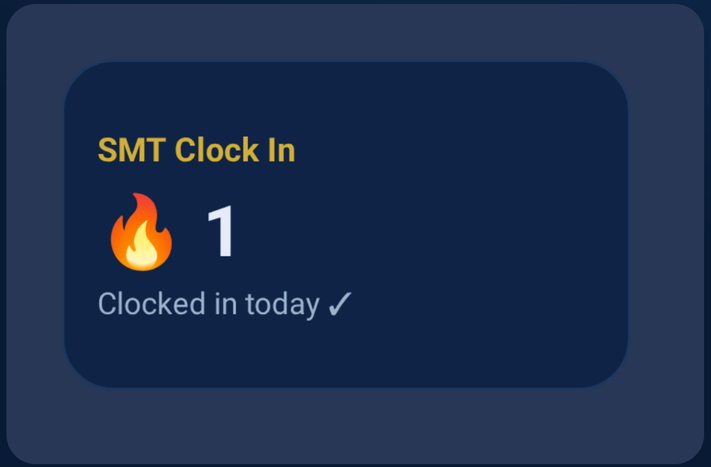

SKR, a widget, and a card to share.

SKR is a ninth coin to call. SMT doesn't trade it, so it's you vs the market. The app reads your SKR balance on mainnet, read-only.

Any call can be shared as a card with its transaction.

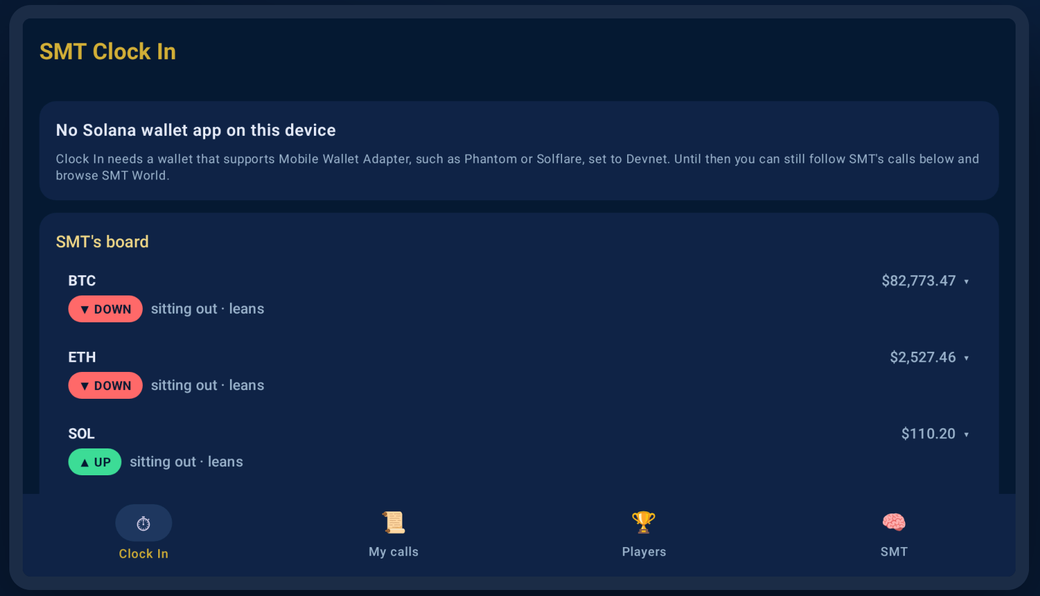

A home-screen widget keeps the streak in view. It reads the phone's cache, so it costs no network.

BUILT DURING THE HACKATHON

A native Android app, written October 7 to 12, 2026.

- SMT, the trading agent, and SMT World, its web app, existed before. This Android app is new.
- Kotlin + Jetpack Compose. Four native tabs: Clock In, My calls, Players, SMT.
- Mobile Wallet Adapter for connect and signAndSendTransactions. The memo transaction is built by hand and matches solders byte for byte.
- No Google Play Services. The same APK runs on Fire TV, where wallet features hide themselves.

WHAT'S NEXT

From a daily call to a track record nobody can edit.

SMT's public record

Every real call SMT makes lands on chain with a timestamp. A season of them is a track record its operator can't rewrite.

Mainnet and the dApp Store

Publish on the Solana dApp Store and move the record to mainnet once the game is tuned.

The full SMT World

The same app grows into SMT World on phones and TVs, where users follow the agent.

Try it on an Android phone

Scan for the APK. Set Phantom or Solflare to Devnet, get free SOL at faucet.solana.com.
