

SOLANA MOBILE · CLOCK IN · OCTOBER 2026

SMT World: Clock In

Call the market once a day. See what the AI called. Solana keeps the score for both of you.

[Android APK](#)

[Mobile Wallet Adapter](#)

[Solana devnet](#)

THE PROBLEM

Trading apps give you prices. AI trading agents give you claims.

- An AI agent's track record is whatever its operator's logs say. Nobody outside can check it.
- A market app gives people no reason to open it tomorrow, except another price chart.
- Clock In turns one prediction a day into a habit, and writes both sides of it on chain: yours and the AI's.

HOW A CLOCK IN WORKS

One call a day. Three taps.

1

Pick one of 8 coins. Call it UP or DOWN for the next 4 hours.

2

Your wallet (Phantom or Solflare) signs one devnet transaction through Mobile Wallet Adapter.

3

Only then does SMT reveal its own call on that coin, with its reasons.

4

4 hours later both calls are graded against the real price. You get a notification.

THE SOLANA PART

Every Clock In is a memo signed by your wallet.

SMT Clock In v1 | BTC | me UP @ 85482.01 binance | SMT DOWN 36% WAIT | grade +4h

Both calls, one timestamp

Your call and SMT's call land in the same transaction, so neither can be written after the market moves.

Checkable without the app

The memo is plain text with the entry price and its source. Anyone can re-grade a call from Solana Explorer and public price data.

History lives on chain

Streak and history are rebuilt from the wallet's transactions (getSignaturesForAddress), so a reinstall or a new phone loses nothing.

Free to play

Devnet only. A Clock In costs about 0.000005 devnet SOL from the public faucet. No real money moves.

THE REVEAL

An AI that shows its work.

- SMT is a multi-persona trading agent: order flow, whales & on-chain, sentiment, technical, regime and catalyst each vote.
- A judge turns the votes into a call and explains it in plain words, including why it's sitting a coin out.
- When SMT sits out, the app grades its lean and says so. If the feed is more than 6 hours old, SMT isn't scored.

SMT Clock In

5-day streak

Clocked in today ✓ Come back tomorrow to keep it going.

Best streak: 5 days

You're on chain ✓

You called BTC ▲ UP at \$85,482.01. It's graded at 16:03, and you'll get a notification.

Memo: SMT Clock In v1 | BTC | me UP @ 85482.01
binance | SMT DOWN 36% WAIT | grade +4h

Now, SMT's call on BTC

▼ DOWN

SMT is sitting out (36% conviction), leaning ▼ DOWN

My committee is sitting out BTC at 36% conviction — advisory; my written setups decide the trades. Flow and Flows leaned short, but no one else lined up — not enough to agree on a side. The committee sees nothing worth the fee drag yet — a position open here follows its own setup's exit rule, not this vote.

Who voted

Order flow · 66%

flow_signal SHORT 66% [weex+binance imb=-0.388]

Sentiment · 65%

Recent exchange tape shows aggressive sell-side dominance (-0.2002 imbalance) compounded by ETF outflows reported at [10-06 13:427]

Screen rendered from the app's code with sample data. SMT's reasons are from its public feed.

My calls

You vs SMT

You	SMT
75%	50%
3 right of 4	2 right of 4

Each call is graded on the price move 4 hours later. When SMT is sitting out, its lean is graded. When its personas cancel out or its feed is old, SMT isn't scored.

Your calls, read from devnet

SOL Mon 5 Oct, 12:25 **+1.14%**

You **▲ UP** SMT **▼ DOWN** 31% wait

WHY PEOPLE COME BACK

A reason to open it every day.

A streak kept on Solana

Miss a day and it resets. It survives a lost phone.

A result 4 hours later

A notification when your call and SMT's are graded.

You vs the AI

A running score. Beating a trading agent is a better hook than a price alert.

A 9:00 nudge

Only if you haven't clocked in yet. One switch turns it off.

BUILT DURING THE HACKATHON

A native Android app, written in October 2026.

- Kotlin + Jetpack Compose. Three native tabs; SMT World's web app is one of them.
- Mobile Wallet Adapter for connect and signAndSendTransactions.
- The memo transaction is built by hand and matches solders (Rust solana-sdk) byte for byte. Devnet accepts it.
- No Google Play Services. The same APK runs on Fire TV, where wallet features hide themselves.
- Reused, already public: SMT World's web app and SMT's decisions feed. The trading agent itself isn't in the repo.

WHAT'S NEXT

From a daily call to a public scoreboard.

Leaderboard with no server

The memos are public, so anyone can rank players, and SMT, straight from the chain.

Mainnet and the dApp Store

Publish on the Solana dApp Store and move the record to mainnet once the game is tuned.

The full SMT World

The same app grows into SMT World on phones and TVs, where users follow and copy the agent.

Try it on an Android phone

Scan for the APK. Set Phantom or Solflare to Devnet, get free SOL at faucet.solana.com.
